CS 470 Final Reflection

https://youtu.be/HhMcmuh6-58

      This course will help me to reach my professional goals by carrying out the knowledge that I have gained concerning AWS, frontend, Node.js, just to name a few. These skills are valued skill that I get to place on my resume to help me to scale in the technical industry. Those skills listed will help make me more marketable as a candidate in technology. As a whole, my strength as a software developer would be working with the backend side of the operation. The roles that I am open and prepared to work for are Software Engineer, Data Analysts, and a Project Manager, just to name a few. Both miroservers and serverless try to be incognito. The cost would be up. Serverless is more cost predictable. Software engineer roles sometimes involve pay-for-service.
